Global Tropics Hazards And Benefits Outlook May 31, 2016

Stephen Baxter

<u>Outline</u>

- 1. Review of Recent Conditions
- 2. Synopsis of Climate Modes
- 3. GTH Outlook and Forecast Discussion
- 4. Connections to U.S. Impacts

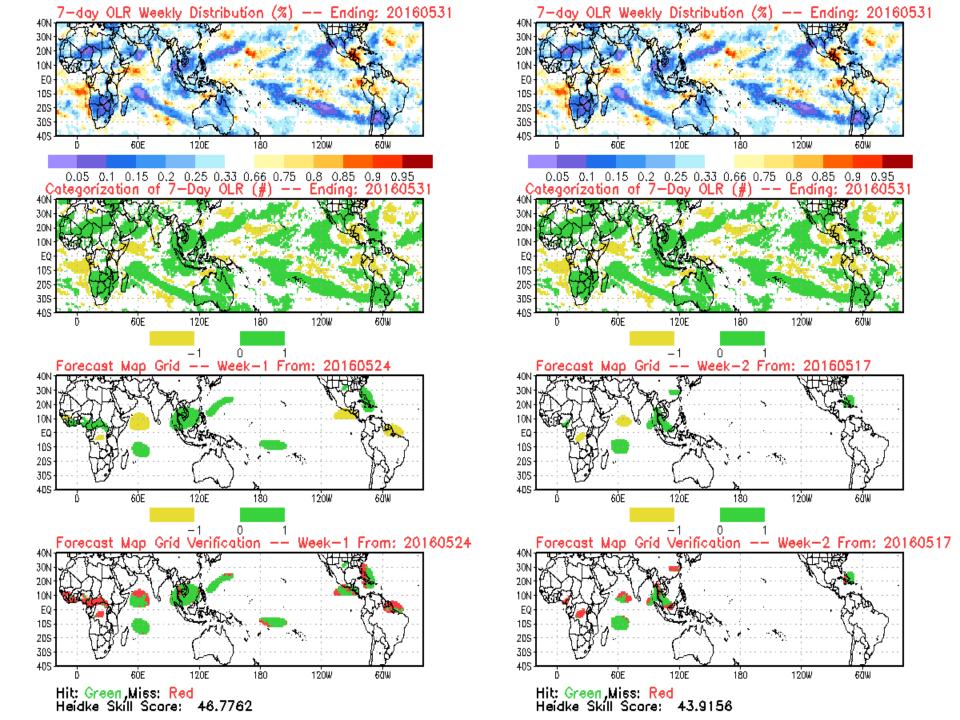

Outlook Review

Week 1 - Valid: May 25, 2016 - May 31, 2016

Cool shading More clouds/rain

Warm shading Less clouds/rain

Synopsis of Climate Modes

ENSO:

La Niña Watch in effect as of 14 April 2016

ENSO Neutral likely during late spring/early summer 2016; possible La Niña conditions to develop by late summer/early fall. El Niño is weakening, though large area of 30°C SSTs still exists over central South Pacific (0-15S, DL-150W). More than sufficient to sustain convection.

MJO and other subseasonal tropical variability:

- MJO weak in RMM index last week. Velocity potential index indicates enhanced phase over the Western Hemisphere.
- Most dynamical model MJO index forecasts depict the MJO signal to remain weak early in Week-1, followed by redevelopment over the Indian Ocean during Week-2. **High uncertainty.**

Extratropics:

• The extended range temperature and precipitation forecasts for the U.S. are not likely to be impacted by the MJO or the decaying El Niño, but more likely impacted by mid-latitude frontal/cyclonic activity.

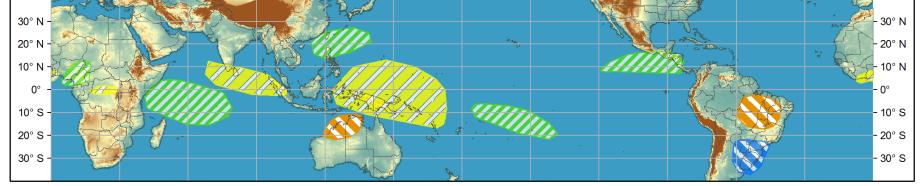

Global Tropics Hazards and Benefits Outlook - Climate Prediction Center

Week 2 - Valid: Jun 08, 2016 - Jun 14, 2016

Produced: 05/31/2016 Confidence High Moderate

Forecaster: Baxter

Tropical Cyclone Formation Development of a tropical cyclone (tropical depression - TD, or greater strength).

Above-average rainfall Weekly total rainfall in the upper third of the historical range.

Below-average rainfall Weekly total rainfall in the lower third of the historical range.

Above-normal temperatures 7-day mean temperatures in the upper third of the historical range.

Below-normal temperatures 7-day mean temperatures in the lower third of the historical range.

Product is updated once per week, except from 6/1 - 11/30 for the region from 120E to 0, 0 to 40N. The product targets broad scale conditions integrated over a 7-day period for US interests only. Consult your local responsible forecast agency.

MJO Observation/Forecast

Wheeler-Hendon based analyses of model forecasts indicate a weak signal during Week-1, with an emerging signal over the Indian Ocean later in Week-2.

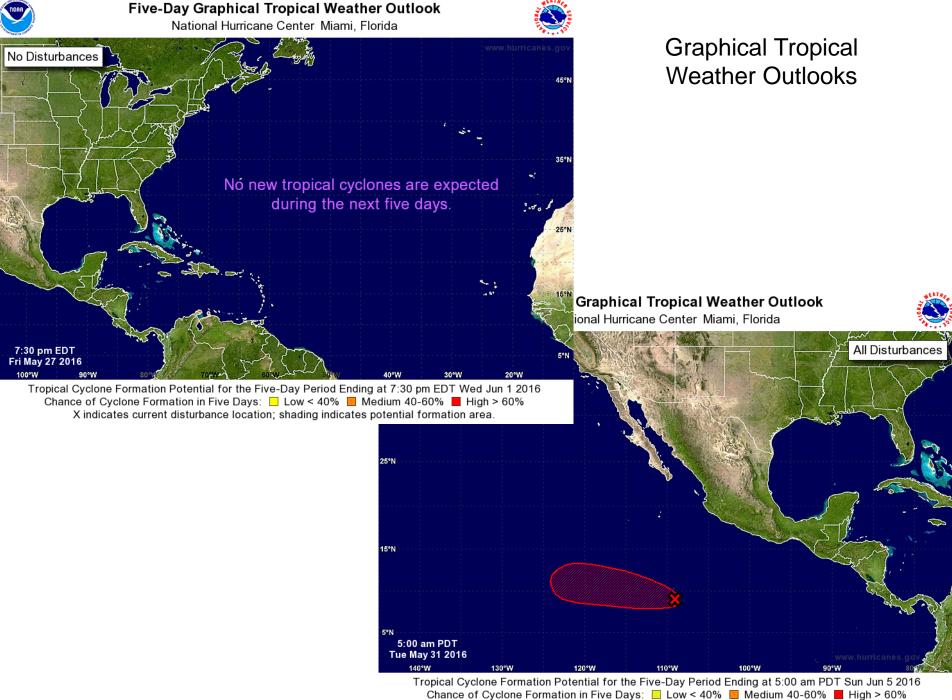

MJO (blue, CINT=12); ER (black, CINT=12); Kelvin (green, CINT=12)

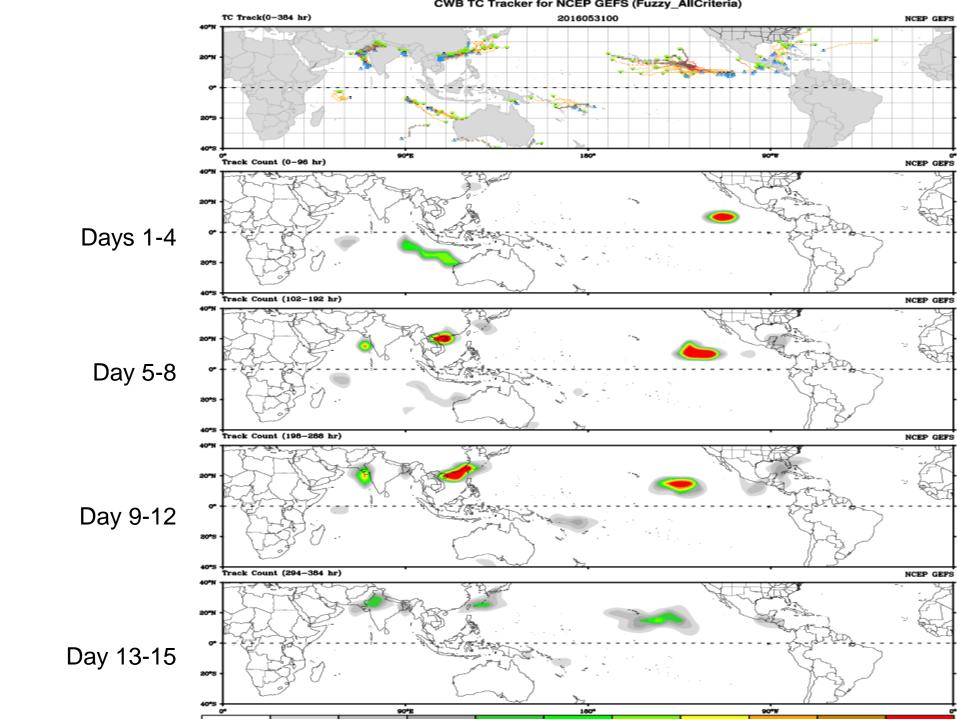

El Niño appearance suppressed relative to earlier this year.

Complicated pattern with MJO, multiple Kelvin waves, and equatorial Rossby wave influences.
